Education

BITS Pilani

Bachelor in Computer Science — CGPA: 7.6 / 10

2024 – 2028

Bengaluru

Experience

GoSeek

2026 – Present [Live]

Technical Co-Founder

Bengaluru, India

- Co-founded a subscription-based freelance marketplace with Megh Patel, who runs all sales and BD while I own every product and technical decision from day one.
- Built the full platform with Next.js 14, TypeScript, Supabase, and Framer Motion, including the brand system, subscription model logic, and freelancer verification flow.
- Solving a real gap in the Indian market where businesses either pay 20% commission to global platforms or hire full-time when they only need on-demand talent.

RentO

2026 – Present [Live] [GitHub]

Technical Co-Founder

Bengaluru, India

- Co-built a peer-to-peer rental marketplace for cameras, audio gear, and gaming consoles with Megh Patel (business and GTM), replacing informal WhatsApp gear sharing with a payment-protected platform.
- Engineered the full two-sided booking lifecycle across request, approval, active, and return states with Stripe webhook integration handling real transactions end to end.
- Designed the complete database schema using Prisma ORM and PostgreSQL, with Clerk for auth and UploadThing for listing image uploads.

Chorus

2025 [Live] [GitHub]

Technical Co-Founder

Remote

- Co-founded a creator commerce platform for exclusive merchandise drops with a creative partner who owned brand entirely while I owned the full technical stack a boundary that made the product significantly better.
- Built an immersive experience with 3D rendering and scroll-based animations using Next.js, tRPC, Framer Motion, and GSAP.
- The first drop moved 400 units profitably with zero paid ads and no external funding.

Projects

MacroMind | Swift, SwiftUI, HealthKit, Gemini AI, Swift Charts, MVVM

2025 [GitHub]

- Built a native iOS nutrition tracker from scratch after finding every existing app too complicated to actually stick with users type a meal in plain language and Gemini AI returns the macros instantly.
- Kept all health data on-device through HealthKit, which was a deliberate privacy decision, not the path of least resistance, and visualized weekly trends using Swift Charts.
- Followed Apple HIG throughout not as a checklist but as a way of thinking about what the app should and should not do. Deciding what to cut was harder than building.

HuesOfMe | SwiftUI, SwiftData, WidgetKit, App Groups, UserNotifications

2025 [GitHub]

- Designed and built a native iOS mood journal where users log emotions as colors, building a visual mosaic of their emotional patterns over time lower friction than traditional text journaling.
- Built the full Apple ecosystem experience: core SwiftUI app, Home Screen Widget via WidgetKit, streak tracking, gentle notifications, and secure data sharing between app and widget via App Groups.
- All data stays on-device with SwiftData, and the project pushed me to think beyond the app boundary and into how Apple's platform works as a whole.

Technical Skills

Apple Platform: Swift, SwiftUI, HealthKit, SwiftData, WidgetKit, Xcode, Apple Human Interface Guidelines

Languages: TypeScript, JavaScript, Python, Java

Frameworks: Next.js 14, React, Node.js, tRPC, Framer Motion, GSAP

Data and Infrastructure: PostgreSQL, Prisma ORM, Supabase, MongoDB, Redis

Services and Tools: Stripe, Clerk, UploadThing, Vercel, Git

AI: LangChain, CrewAI, Gemini API, OpenAI API

Leadership and Extracurricular

Yugaantar College Fest

2025

Core Organising Member

Bengaluru

- Helped run the founding edition of a major cultural TechFest, which brought 3,500 attendees across multiple events and stages.
- Managed cross-team coordination and on-ground operations across departments, which taught me that keeping people aligned under pressure is often harder than any technical problem.
